Summary

Experienced Software Engineer (4.5+ years) with expertise in designing and developing high-performance backend systems and distributed web applications. Proficient in building scalable microservices and resilient monolithic architectures, and experienced in architecting and integrating multi-model AI agents using modern frameworks such as LangChain. Strong understanding of Agile SDLC, SOLID principles, and contemporary software engineering practices.

Technical Skills

Programming: Java, Python, SQL, JavaScript, C++, C, HTML5, CSS

Frameworks: SpringBoot, LangChain, MongoDB, MySQL, Node, REST APIs, gRPC, Kafka

Tools and Technologies: AWS, GIT, Postman, Docker, Jenkins.

Development: Test-driven development, CI/CD, Version Control (Git), Github, Firebase.

Professional Experience

Software Development Engineer 2, Acko Technologies Private Limited, Bengaluru **Oct 2022 - Present**

- Developed a policy analyzer using **LangChain** with a multi-model AI agent that answers user queries based on uploaded policy PDFs and leverages a predefined RAG pipeline to supplement missing information.
- Led a team of two in onboarding a new health product onto the **SureOS architecture**, providing end-to-end support for a phased rollout strategy.
- Significantly improved the responsiveness of critical user-facing APIs, achieving a **60%+** reduction in latency (**from 1300 ms to 500 ms**) using multithreading and async processing, adhering to JAVA best coding practices.
- Developed the Migration Strategy for effectively transitioning of **45000** active health policies from the old legacy system to the new robust SureOs architecture using integration of AWS SQS, S3 and Lambda functions
- Spearheaded the engineering of robust **SureOS platform** for new insurance product from scratch, enabling in significant reduction in development time, accelerating new feature additions by **40%** and new product onboarding by **80%**.
- Architected and developed generic **Camunda DMN** based low latency, generic and scalable **Pricing Engine** with caching, supporting pricing, discount and taxation for any kind of platform.

Software Development Engineer 1, Acko Technologies Private Limited, Bengaluru **Jul 2021 - Oct 2022**

- Enhanced user experience by improving search feature for constantly growing network hospital dataset using **elastic search** and **google maps api** improving the latency from **1500ms to 400ms** and company's NPS from **60 to 70**.
- Built a highly scalable **communication system** powered by Kafka, designed to handle retries, detailed logging, and distribute messages across email, WhatsApp, SMS, and push notification channels.
- Implemented New Relic-based alerting for production APIs and systems to quickly identify and address impacts.
- Completed **spring-boot update** for existing backend applications, resolving **23** critical vulnerabilities including End of Life(EOL) and log4j

Projects

OCR-Enabled Data Extraction for Instant Health Claim Processing Tool **Nov 2022 – Nov 2022**

- Designed a web application in a **48-hour hackathon** utilizing the Java for backend and PGSQL for database management, enabling over **100 users** to securely upload their claim documents and get it process instantly.
- Integrated **AWS Textract** into the application to accurately scan and extract vitals, performing validation checks, automating the claim process and improving the processing time to **just 30 40 seconds**.

Object detection App using YoloV3 models **May 2020 - June 2020**

- Created an Android application for real-time object forecasting from camera input, leveraging a Deep Neural Network model trained with reinforcement learning

Education

B.Tech in Information Technology

Indian Institute of Information Technology Lucknow, Lucknow

July 2017 - May 2021

CGPA: 9.1/10

Awards & Achievements

- * Won 1st prize at 48hr long Acko hackathon for developing instant claim processing application
- * Secured 198 rank in Codechef's November Cookoff out of 3000 participants
